# Freelancer Office

Modern full-featured project management system for Freelancers

Why choose Freelancer Office

Here are some of the features included in the current release of Freelancer Office.

Project Management

Get your projects organized! Assign a project to your collaborators and let your clients see the progress of their work on their Dashboard.

Invoicing System

Freelancer Office comes with Invoicing System so you can receive Payments via Paypal and get your database updated automatically.

Create Estimates

Create and send detailed estimates and get to know the estimate status anytime. Once an Estimate is accepted, you can instantly convert them into Invoices.

Bug Tracker

What gets tracked gets improved! That means carefully tracking what needs fixing, fixing it and verifying that the fixes work.

Messaging System

Use this feature to discuss anything with your clients/collaborators. Just like the Project comments, the recipient is notified via email when you send them a message.

Project Comments/Files

Let your clients know what is happening using the Projects Comments area. You can also share files with descriptions across the system with your clients with email notifications.

Freelancer Office works on any Device

Developed using Notebook Bootstrap 3 Theme - Themeforest

One Application for Multiple Devices.
